UBT (BT MAS 403)
TAPER AND BOTH FACE CONTACT HOLDER
(After Clamping)

BT (MAS 403) STANDARD HOLDER
(ONLY TAPER CONTACT)
(After Clamping)

In UBT Tool Holder as mentioned Taper and both faces are in contact, due to which spindle and holder acts as one single unit, this allows a Higher "Radial Rigidity" hence we get good surface Finish and dimensional accuracy while machining, also low vibration at higher speeds which increases Tool Life. Hence UBT Tool Holder has a remarkable significant as compared to Standard Tool Holders.

Note : UBT Tool Holders are only recommended to use in Calibrated UBT Spindle Machines.
